Adresse fieldset

< Feldset >

create interfaces

```
export interface Product {  
  name: string  
  number price: number  
}
```

```
export interface OptionArticles {  
  [key: string]: Product[]; }  
}
```

```
export interface OnOptionArticles {  
  [key: string]: Product[]; }  
}
```

Arrays:

```
export let data1: OptionArticles = {
```

```
  "Kugeln": [
```

```
    { name: "Rote Kugeln", price: 1.50 },
```

```
    { name: "Weisse Kugeln", price: 1.60 }, ] };
```

generale Fieldset

Inhalt aus data 1

for in Schritte Iteration über
data 1 keys

create fieldsets for all keys

deklaration von value der mit
key assoziiert wird

value ist ein array
mit Schritte drüber laufen lassen

$i = 0$

$i++$

$i < \text{value.length}$

create
input

create label

label inner HTML
key array inhalt

append label / input
to fieldset

change //

target Abfrage des
in generak Fieldset //
erzeugten group

Switch case
je nach gruppe
entsprechendes key-
array

target
shoppingcart.push

h display shopping
cart

display shoppingcart

create Element
div

i = 0

itt

i < shoppingcart.length

get Element by
id aus HTML
für Bestellung

append div as
child to id

div. inner HTML
changed target
.name / .price

refresh shoppingcart d
